

The Sustainable Environment Workshop of the South-East Asia

Hosted by National Taiwan University and the Ministry of Science and Technology, TAIWAN
November 14-22, 2015, Taipei, TAIWAN

The Global Change Research Center (GCRC) at the National Taiwan University will host an international workshop for sustainable environment. The themes of this workshop will focus on coastal change, energy and water resource, environmental hazards and environmental education. All these themes will be covered by reputable Taiwan scholars and scholars from around the world. As these workshop themes will be hinged on both local phenomena/experience and global implication, this workshop is part of the Future Earth Coasts (FE-Coasts) and the Commission of Geomorphology & Society of International Geographical Union (IGU).

This workshop will include 4-day lectures and a 3-day field excursion to various sites of Taiwan. The combination of the lectures and field excursion will demonstrate important issues and research results related to sustainable environment and how they would be associated with sustainable development in the global era.

The invited international delegates will be sponsored by Ministry of Science and Technology, TAIWAN (MOST-TAIWAN). The sponsorship will include economy air fare, local transportation, food and accommodation throughout November 14-22, 2015.

The workshop is tentatively scheduled as follows:
